

Alternative for POP

Adamed, Inc's, intra-vaginal device for the medical management of pelvic organ prolapse (POP) and weak pelvic floor muscles (Colpexin Sphere) is now available in the United States. The product, which has been shown to reduce POP when placed above the levator ani muscle, may provide an alternative to surgery and traditional therapies, such as vaginal pessaries. It may also help strengthen pelvic floor muscles when used in conjunction with the regular performance of pelvic floor exercises. Fully equipped with a fitting and sizing tool kit, the product is available in five different sizes, ranging in diameter from 32 mm to 44 mm.
